

New – Google Chromebook Users Can Now Access Legacy Windows Applications and Desktops

WITH ERICOM ACCESSNOW – GOOGLE CHROMEBOOKS OFFER A COMPLETE ENTERPRISE ACCESS PLATFORM!

Empower users to access all of their applications – Google Apps, and Windows applications and desktops. All you need is a Chromebook and an Internet connection.

Ericom delivers AccessNow – a pure HTML5 RDP Client, providing access to Windows applications and desktops running on Windows Terminal Services / RDS / VDI platforms directly from Chromebooks.

THE CHROMEBOOK AND ACCESSNOW COMBINED SOLUTION

- Does away with Windows PCs software management. Does not require Java, Flash, Silverlight, ActiveX or any other underlying technology on the end-user device, significantly reducing IT overhead.
- Gives users the flexibility and mobility to access both their Web apps and Windows desktops from anywhere. Using AccessNow, end-users can hook up to an internet connection and access their Windows desktops and applications directly from within the browser.

City of Orlando deploys 600 Chromebooks with Ericom AccessNow >>

REAL BENEFITS!

AccessNow and Google Chromebooks are the ideal solution for education, government, healthcare, financial and other organizations that need to provide access to both Windows desktops and applications and Web apps, with ZERO client installations:

- Simple, easy and inexpensive to maintain — does not require any infrastructure for deployment, upgrades or patches on the user's device — NO software installation or plug-ins required!
- Providing users with Chromebooks rather than PCs, makes life very easy for system administrators and end-users alike
- Helps IT departments solve the Bring Your Own Computer (BYOC) challenge
- Work with your Web apps and any Windows applications — simultaneously!

HOW DOES ACCESSNOW WORK?

It's so simple! All you need is a Google Chromebook, and an internet connection.

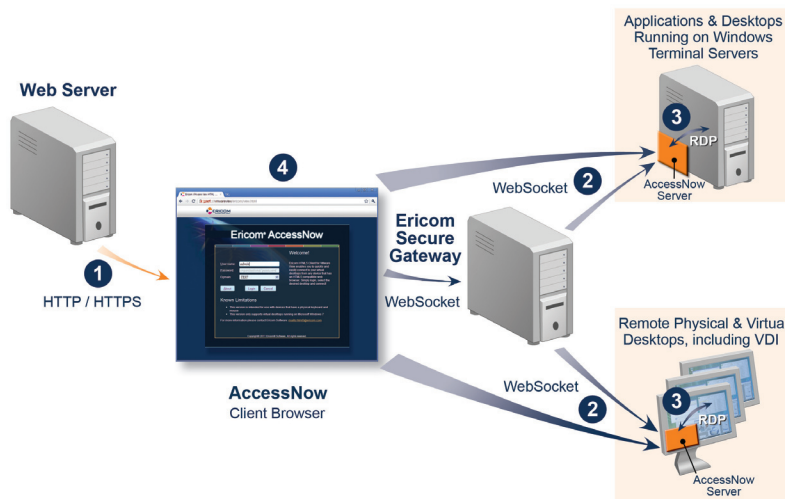

- Open a web page
- Enter the address of the Ericom AccessNow Server (the Terminal Server or VDI platform)
- Enter your credentials
- Press 'Connect' — The desktop (or application) appears directly inside the browser window
- That's it.

Alternatively, Ericom AccessNow can be integrated into the organization's portal and by simply clicking on an icon the user will connect to their Windows apps or desktop.

Marvin Smith, System Administrator for the City of Orlando commented,

"We have been evaluating Chromebooks for a variety of applications throughout various City agencies. Our objective was to be able to provide users with flexibility in accessing VMware View virtual desktops from any location. In fact, employees plan to take Chromebooks to meetings, use them while they work from home and on lunch breaks. Ericom's AccessNow for VMware View provides a key connectivity component in empowering users to access vital resources from the Chromebooks. We have successfully installed and tested AccessNow for VMware View and plan to roll it out within our VMware View and Google Chromebook environments."

ERICOM ACCESSNOW COMPONENTS:

1. Entire client downloads from web server on-demand — less than 500KB!
Note: the Web server can be on the same machine as the RDP host / target machine.
2. Client connects to AccessNow Server using WebSockets — AccessNow Server is usually installed on RDP host itself.
3. AccessNow Server translates WebSocket communication to/from RDP
4. Remote Windows desktop/application UI is displayed inside the browser window

NOTE: Optionally, client connects to AccessNow Server through Ericom Secure Gateway
