Feature Benefits of Ericom PowerTerm WebConnect RDP Functionality

Feature	Description	Benefit
Administration		
Centralized Administration	A GUI application for performing all management operations of servers, applications, sessions, users and groups.	Allows server management tasks to be performed easily, rapidly, and more cost effectively
Remote Administration	Administration application downloads and installs through the web browser as an ActiveX control, and connects securely to the server using SSL.	Securely administrate the server from anywhere, anytime.
Real-time View	Administration application view of the server state updates automatically in real-time.	The view of the server state is always correct and up-to-date, even when several administrators operate concurrently.
LDAP/Active Directory Integration	Integrates with Microsoft Active Directory and compliant LDAP servers for user import and authentication.	Leverage the central user repository for automating the process of defining new users.
Versatile Client Policy	Define client based policies using IP ranges, host names, etc.	Allows system administrators easily control access to servers.
Application Publishing	Instantly publish remote applications for access by any user or group.	Provides users with easy access to their applications
Report Generation	Generation of customized reports detailing user operations in Excel CSV format.	Monitor and audit user operations over any period of time.
Comprehensive Logging	Optionally log all server operations.	Simplifies server maintenance and support, and enables monitoring and verifying server behavior.
Built-in Instant Messaging	Users and administrators can communicate using built-in instant messaging.	Users can easily ask for assistance by directly contacting and administrator, with the ability to send screen shots.
SupportView – Remote Desktop Support	Per user's request, an administrator can take over the user's desktop.	Remote control and remote management greatly simplify the administrator's ability to resolve helpdesk and support issues.

Feature	Description	Benefit
Server-side scripts	Simplified scripting for customizing server behavior.	Define custom behavior for users and sessions.
Server Database Replication	Easily copy entire server database.	Easily move servers and simplify the creation of backup servers.
Server		
High-Scalability	Highly scalable server supports thousands of concurrent sessions.	Reduce TCO and simplify administration.
Failover	Define primary and backup servers, providing high availability and reliability	Guarantee constant system availability.
Gateway Mode	Optionally route all traffic through a single configurable port. Valid for desktop and application modes.	Allows easy firewall traversal and secure access to terminal server.
Enhanced Security	Ability to tunnel RDP traffic through secure transport (SSL). Requires gateway mode.	Use RSA SSL for maximal security.
Client		
Centralized Client Connection Management	Display list of all available sessions. Activation of a session via point-and-click, with no need to re-enter username and password.	Direct access to numerous types of application and environments (terminal server/application, legacy application and etc.) Appropriate client component downloaded and activated on demand.
System Tray Icon	Access system services at any time using an icon in the System Tray.	Open the session list as well as Instant Messaging and SupportView for online assistance.
Seamless Windows	Remote applications fully integrated into the local desktop, giving local and remote applications the same look and feel.	Provides a natural experience for the end-user which reduces user training requirements and support overheads Provides the ability to operate a mixed thin-client and PC network
Desktop Publishing	Full Windows desktop	Extends regular terminal server functionality with centralized management

Built-in Terminal Emulation	Access to additional host types including IBM Mainframe, IBM AS/400, Unix, Linux, OpenVMS, Data General, SCO, Tandem, HP-3000.	An all-in-one server access solution providing all of your host connectivity needs.
Built-in File Transfer	In addition to RDP-based remote drive access, provides secure FTP, AS/400 Data File Transfer, IND\$FILE and more.	Multiple file transfer protocols within a single package.
